^{**}Air processing capacity is converted to the suction air condition(at atmospheric pressure, 32deg.C and 75%).

**Special-order models available with an air pressure specification of 1.0 MPa.

**Oil concentration is measured in conformity with ISO8573-2 "Compressed air - Part 2: Test methods for oil aerosol content", not including oil-vapor.

**Air connection flange: JIS 10K FF, No companion flange is attached.

**Refer to the specification sheet for further details.

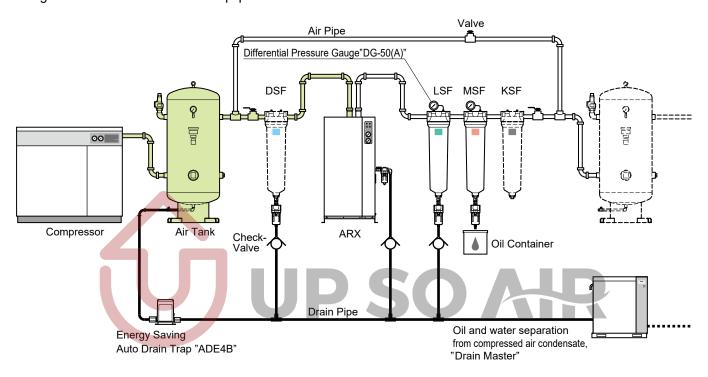

Basic System Examples

Air Quality Notes

Please install ORION genuine Clean Air Filters 'before and after ARX dryer' for the best performance.

Safety Notes

Before operating equipment, please read the operating manual carefully, and only use as indicated. For installation of equipment and required wiring, employ a qualified person or consult with your dealer. Be sure to select equipment which suits your needs. Do not use equipment for purposes other than intended. Doing so can lead to accidents or equipment breakdown.

System	Applications
★☆ DSF ARX LSF MSF KSF	General Painting, Precision Machinery Industry, etc
☆ DSF ARX LSF MSF	Standard Pneumatic
ARX LSF MSF	Standard Pneumatic
A LSF ARX MSF	▲ Not recommended

- 1) In case no Drain Filter (DSF) before large ARX air dryer (Heavy duty model) does not cover its warranty.
- 2) Please consult with your dealer or ORION directly for further information when compressed air is supplied for medical, food, or clean room use.
- 3) Please set up above ☆system when Oil-Free compressor is installed.
- 4) Please set up above ★system when intake air of an air compressor includes large amount of oil droplets.
- 5) **A** LSF-AL is not recommended to be installed before ARX dryers because it will increase differential pressure and drain water will be accumulated in the differential pressure gauge.
- 6) Please refer to "Compressed Clean Air catalog" (D-AG02 10) for details of "DRAIN MASTER" series.
- 7) SUS pipe and SUS air tank are recommended when Oil-Free compressor is installed (as indicated in Green).

 ARX Heat-Exchanger is made of SUS
- 8) Please install a check valve on exhaust pipe of filter.
- 9) Please consult with your dealer or ORION directly when you are not certain of air tank location (before or after ARX).

Model Selection

1. For Air Dryer

2

Temperature conditions

Table A: High Inlet Air Temp. Models
Table B: Standard Air Temp. Models
Table C: Water Cooled Models
Table D: Air Cooled Models

Table D : Air Cooled Models

Table E : Air Pressure Coefficient

Calculate the necessary air capacity for the model selection.

Air capacity required =

Intake air volume / (A or B or C or D × E)

Please select the suitable model from the specification which has bigger Air Processing Capacity (P3) than the air capacity required.

Model selection Example

Inlet Air Temp.	60°C	Ambient Temp.	35°C	Air Flow	6m³/min
PDP	10°C	Air Pressure	0.59MPa	Frequency	50Hz

From charts, Inlet temp. coefficient --> 0.70

Air Pressure coefficient --> 0.93

Air capacity required for dryer. $6 / (0.70 \times 0.93) = 9$

6 / (0.70×0.93)=9.2m³/min

The suitable model to process 9.2m³/min is ARX90HK, as its capacity exceeds the required value.

A:Inlet Air Temperature Coefficient (High Inlet Air Temp. Models)

Inlet air temperature	(°C)		50			60			70			80
